Lincoln, NE 68508

Re: City of Lincoln Police and Fire Pension Fund

Dear Council Members:

At your request, we have performed an annual actuarial valuation of the City of Lincoln Police and Fire Pension Fund as of August 31, 2011 for determining the actuarial contribution rate for fiscal year 2013. The major findings of the valuation are contained in this report. This report reflects the benefit provisions in effect as of August 31, 2011. There were no changes in the benefit provisions or assumptions from the prior valuation. Our findings are set forth in this report.

In preparing this report, we relied, without audit, on information (some oral and some written) supplied by the Plan's staff. This information includes, but is not limited to, plan provisions, member data and financial information. We found this information to be reasonably consistent and comparable with information used for other purposes. The valuation results depend on the integrity of this information. If any of this information is inaccurate or incomplete, our results may be different and our calculations may need to be revised.

All costs, liabilities, rates of interest, and other factors for the Plan have been determined on the basis of actuarial assumptions and methods which are individually reasonable (taking into account the experience of the Plan and reasonable expectations); and which, in combination, offer our best estimate of anticipated experience affecting the Plan

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period or additional cost or contribution requirements based on the plan's funded status); and changes in plan provisions or applicable law. Due to the limited scope of our assignment, we did not perform an analysis of the potential range of future measurements. The City has the final decision regarding the appropriateness of the assumptions and adopted them as indicated in Appendix C.

Actuarial computations presented in this report are for purposes of determining the recommended funding amounts for the Plan. Actuarial computations presented in this report under GASB Statements No. 25 and 27 are for purposes of fulfilling financial accounting requirements. The computations prepared for these two purposes may differ as disclosed in our report. The calculations in the enclosed report have been made on a

basis consistent with our understanding of the Plan's funding requirements and goals. The calculations in this report have been made on a basis consistent with our understanding of the plan provisions described in Appendix B of this report, and of GASB Statements No. 25 and 27. Determinations for purposes other than meeting these requirements may be significantly different from the results contained in this report. Accordingly, additional determinations may be needed for other purposes.

Milliman's work is prepared solely for the internal business use of the City of Lincoln. To the extent that Milliman's work is not subject to disclosure under applicable public records laws, Milliman's work may not be provided to third parties without Milliman's prior written consent. Milliman does not intend to benefit or create a legal duty to any third party recipient of its work product. Milliman's consent to release its work product to any third party may be conditioned on the third party signing a Release, subject to the following exception(s):

(a) The City may provide a copy of Milliman's work, in its entirety, to the City's professional service advisors who are subject to a duty of confidentiality and who agree to not use Milliman's work for any purpose other than to benefit the Plan.

(b) The City may provide a copy of Milliman's work, in its entirety, to other governmental entities, as required by law.

No third party recipient of Milliman's work product should rely upon Milliman's work product. Such recipients should engage qualified professionals for advice appropriate to their own specific needs.

The consultants who worked on this assignment are pension actuaries. Milliman's advice is not intended to be a substitute for qualified legal or accounting counsel.

On the basis of the foregoing, we hereby certify that, to the best of our knowledge and belief, this report is complete and accurate and has been prepared in accordance with generally recognized and accepted actuarial principles and practices. We are members of the American Academy of Actuaries and meet the Qualification Standards to render the actuarial opinion contained herein.

We herewith submit the following report and look forward to discussing it with you.

Respectfully Submitted,

MILLIMAN, INC.

Gregg Rueschhoff, ASA
Principal & Consulting Actuary

SECTION 1

EXECUTIVE SUMMARY

OVERVIEW

This report presents the results of the August 31, 2011 actuarial valuation of the City of Lincoln Police and Fire Pension Fund (Plan). The primary purposes of performing a valuation are to:

- determine the employer contribution rate required to fund the Plan on an actuarial basis,
- disclose asset and liability measures as of the valuation date,
- determine the experience of the Plan since the last valuation date, and
- analyze and report on trends in contributions, assets, and liabilities over the past several years.

There was no change in the benefit provisions or actuarial assumptions used in the valuation. The valuation results provide a "snapshot" view of the Plan's financial condition on August 31, 2011. The unfunded actuarial accrued liability increased by approximately $16.5 million from the last valuation. A detailed analysis of the change in the unfunded actuarial accrued liability from August 31, 2010 to August 31, 2011 is shown on page 3.

ASSETS

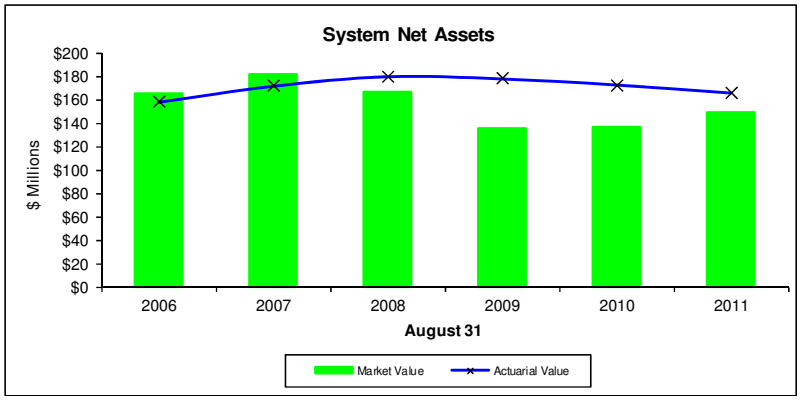
As of August 31, 2011, the Plan had total assets, when measured on a market value basis, of $148.3 million (excluding the COLA Pool assets). This was an increase of $12.5 million from the August 31, 2010 figure of $135.8 million. The market value of assets is not used directly in the calculation of the actuarial contribution rate. An asset valuation method, which smoothes the effect of market fluctuations, is used to determine the value of assets used in the valuation (called the "actuarial value of assets"). Differences between actual return on the market value of assets and the assumed return on the actuarial value of assets are phased-in over a five-year period. Prior to the August 31, 2009 actuarial valuation the gains and losses were phased-in over a four-year period.

See Table 4 on page 12 for a detailed development of the actuarial value of assets. The components of the change in the market and actuarial value of assets for the Retirement Plan (in millions) are set forth in the following table.

This work product was prepared solely for the City of Lincoln Police and Fire Pension Fund for the purposes described herein and may not be appropriate to use for other purposes. Milliman does not intend to benefit and assumes no duty or liability to other parties who receive this work.

	Market Value ($M)	Actuarial Value ($M)
Assets, August 31, 2010	$135.8	$172.3
• City and Member Contributions	6.7	6.7
• Benefit Payments and Refunds	(10.7)	(10.7)
• Administrative Expenses	(0.3)	(0.3)
• Net Investment Income (net of expenses)	16.8	(2.6)
Assets, August 31, 2011	$148.3	$165.4

The annualized dollar-weighted rate of return, measured on the actuarial value of assets was -1.24% and, measured on the market value of assets, was 12.48%. The actuarial value of assets as of August 31, 2011 was $165.4 million, which reflects an actuarial loss of $15.3 million resulting from the phase-in of investment returns from the current and preceding four years.



The actuarial value of assets has been both above and below the market value during this period. This is to be expected when using an asset smoothing method.

Note: Results for years before 2009 were prepared by the prior actuary.

Due to the asset smoothing method, there is a difference of about $17 million between the actuarial value and the market value of assets. This deferred investment loss will flow through the asset smoothing process in the next five years and decrease the Plan's funded ratio, absent favorable investment experience to offset the losses.

LIABILITIES

The actuarial accrued liability is that portion of the present value of future benefits that will not be paid by future employer normal costs or member contributions. The difference between this liability and the asset value at the same date is referred to as the unfunded actuarial accrued liability (UAAL) or (surplus) if the asset value exceeds the actuarial accrued liability. The unfunded actuarial accrued liability will be reduced if the employer's contributions exceed the employer's normal cost for the year, after allowing for interest earned on the previous balance of the unfunded actuarial accrued liability. Benefit improvements, experience gains and losses, and changes in actuarial assumptions and procedures will also impact the total actuarial accrued liability and the unfunded portion thereof.

The Unfunded Actuarial Accrued Liability for the Plan as of August 31, 2011 is:

Actuarial Accrued Liability	$204,990,324
Actuarial Value of Assets	165,436,361
Unfunded Actuarial Accrued Liability	39,553,963

This work product was prepared solely for the City of Lincoln Police and Fire Pension Fund for the purposes described herein and may not be appropriate to use for other purposes. Milliman does not intend to benefit and assumes no duty or liability to other parties who receive this work.

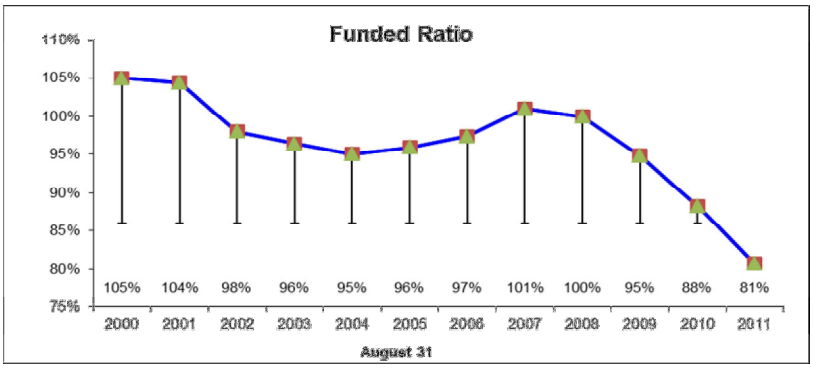
Between August 31, 2010 and August 31, 2011, the change in the unfunded actuarial accrued liability (UAAL) for the Plan was as follows:

	$(M)
UAAL, August 31, 2010	22.9
+ Normal cost for year	6.3
+ Assumed investment return for year	2.0
- Actual contributions (member + City)	6.7
- Assumed investment return on contributions	0.3
= Expected UAAL, August 31, 2011	24.2
Actual UAAL, August 31, 2011	39.6
Experience gain/(loss) (Expected UAAL – Actual UAAL)	(15.4)

The experience loss for the last plan year of $15.4 million was the result of an actuarial loss of $15.3 million on Plan assets (actuarial value) and an actuarial loss of $0.1 million on Plan liabilities.

Analysis of the unfunded actuarial accrued liability strictly as a dollar amount can be misleading. Another way to evaluate the unfunded actuarial accrued liability and the progress made in its funding is to track the funded status, the ratio of the actuarial value of assets to the actuarial accrued liability. This information for recent years is shown below (in millions). Historical information is shown in the graph following the chart.

	8/31/06	8/31/07	8/31/08	8/31/09	8/31/10	8/31/11
Actuarial Value of Assets ($M)	$157.5	$171.3	$179.4	$177.5	$172.3	$165.4
Actuarial Accrued Liability ($M)	$161.6	$169.6	$179.4	$187.3	$195.2	$205.0
Funded Ratio (Actuarial Assets/AAL)	97%	101%	100%	95%	88%	81%
Market Value of Assets ($M)	$164.7	$181.1	$165.9	$134.9	$135.8	$148.3
Actuarial Accrued Liability ($M)	$161.6	$169.6	$179.4	$187.3	$195.2	$205.0
Funded Ratio (MVA/AAL)	102%	107%	92%	72%	70%	72%



Over the past decade, the funded ratio (actuarial value of assets divided by actuarial accrued liability) has been between 81% and 110%, reflecting a well-funded plan.

Note: Results for years before 2009 were prepared by the prior actuary.

As mentioned earlier in this report, due to the asset smoothing method there is about $17 million difference between the actuarial and market value of assets. This deferred investment experience will flow through the asset smoothing method over the next five years, absent favorable investment experience to offset it. If all actuarial assumptions are met and favorable investment experience does not occur, the funded ratio will gradually drop to around 72% in five years as the asset smoothing method recognizes the deferred investment experience. The Plan's funded status will continue to be heavily dependent on future investment returns.

This work product was prepared solely for the City of Lincoln Police and Fire Pension Fund for the purposes described herein and may not be appropriate to use for other purposes. Milliman does not intend to benefit and assumes no duty or liability to other parties who receive this work.

CONTRIBUTION RATES

Generally, contributions to the Plan consist of:

- a "normal cost" for the portion of projected liabilities allocated to service of members during the year following the valuation date, by the actuarial cost method,
- an "unfunded actuarial accrued liability or (surplus) contribution" for the excess of the portion of projected liabilities allocated to service to date over the actuarial value of assets.

Contribution rates are computed with the objective of developing costs that are level as a percentage of covered payroll. The contribution rate for fiscal year 2013 is computed based on the August 31, 2011 actuarial valuation.

The City is required to contribute no less than the employer normal cost plus administrative expenses. Given the Plan's funded status and the unrecognized losses, we recommend the City contribute the full actuarial employer contribution rate. The employer contribution rate increased by more than 2% from the 2010 to the 2011 valuation, as shown below:

	Actuarial Valuation	
Actuarial Contribution Rate	**8/31/11**	**8/31/10**
1. Normal Cost	18.89%	18.83%
a. Member Financed	6.63%	6.69%
b. Employer Portion (1) – (2a)	12.26%	12.14%
2. UAL/(Surplus) Contribution	5.76%	3.48%
3. Employer Contribution Rate	18.02%	15.62%

COMMENTS

As of August 31, 2011, the actuarial accrued liability was $205 million and the actuarial value of assets was $165 million, resulting in a funded ratio of 81%, down from the funded ratio of 88% last year. However, using the market value of assets, the funded ratio is 72%.

Retirement plans use several mechanisms to provide more stability in the contribution levels. These include an asset smoothing method, which smoothes out the peaks and valleys of investment returns, and amortization of any actuarial gains or losses over a period of years. The Plan utilizes an asset smoothing method that spreads the difference between expected and actual return over a five-year period. The rate of return on the actuarial value of assets for the plan year ending in 2011 was about -1% as compared to 12% on the pure market value. The increase in the unfunded actuarial liability from the actuarial loss resulting from experience in FY11 is amortized over a 30-year period, which mitigates the impact of the unfavorable experience.

Given the size of the investment losses in recent years, an increase in the contribution level could not be avoided, even with the use of these "stability mechanisms". The normal cost remained fairly stable as a percentage of payroll, but the Plan's funded status changed from 88% funded to 81%. The unfunded actuarial accrued liability increased by $17 million. As a result, the City's actuarial contribution rate increased from 15.62% last year to 18.02% of pay in this year's valuation.

This work product was prepared solely for the City of Lincoln Police and Fire Pension Fund for the purposes described herein and may not be appropriate to use for other purposes. Milliman does not intend to benefit and assumes no duty or liability to other parties who receive this work.

As mentioned above, the Plan utilizes an asset smoothing method in the valuation process. While this is a common procedure for public retirement Plans, it is important to identify the potential impact of the deferred (unrecognized) investment experience. The key valuation results from the August 31, 2011 actuarial valuation are shown below using both the actuarial value of assets and the pure market value.

	Using Actuarial Value of Assets	**Using Market Value of Assets**
Actuarial Liability	$ 204,990,324	$ 204,990,324
Asset Value	165,436,361	148,347,670
Unfunded Actuarial Liability	$ 39,553,963	$ 56,642,654
Funded Ratio	81%	72%
Normal Cost Rate	18.89%	18.89%
UAL Contribution Rate	5.76%	8.25%
Total Actuarial Contribution Rate	24.65%	27.14%
Member Contribution Rate	(6.63)%	(6.63)%
Employer Actuarial Contribution Rate	18.02%	20.51%

The asset smoothing method impacts only the timing of when the actual market experience on the assets is recognized in the valuation process. If asset returns are not significantly higher than 7.50% over the next few years, the $17 million of deferred investment experience will be recognized and the employer contribution rate can be expected to increase significantly as shown in the "market value of asset" column in the above table.

We conclude this Executive Summary with the following exhibit which compares the principal results of the current and prior actuarial valuation.

SUMMARY OF PRINCIPAL RESULTS

1. PARTICIPANT DATA	8/31/2011 Valuation	8/31/2010 Valuation	% Change
Number of:			
Active Members	562	561	0.2 %
DROP Members	52	55	(5.5) %
Retired Members and Beneficiaries	415	408	1.7 %
Inactive Vested Members	28	26	7.7 %
Total Members	1,057	1,050	0.7 %
Projected Valuation Salaries of Active Members	$ 35,763,446	$ 34,233,197	4.5 %
Annual Retirement Payments for DROP Members, Retired Members and Beneficiaries	$ 9,907,389	$ 9,609,529	3.1 %
2. ASSETS AND LIABILITIES			
Total Actuarial Accrued Liability	$ 204,990,324	$ 195,206,353	5.0 %
Market Value of Assets*	148,347,670	135,835,077	9.2 %
Actuarial Value of Assets*	165,436,361	172,317,463	(4.0) %
Unfunded Actuarial Accrued Liability/(Surplus)	$ 39,553,963	$ 22,888,890	72.8 %
Funded Ratio - Actuarial Value	81%	88%	(8.6) %
Funded Ratio - Market Value	72%	70%	4.0 %

* Excludes the COLA Pool Fund

3. EMPLOYER ACTUARIAL CONTRIBUTION RATE AS A PERCENT OF PAYROLL			
Normal Cost	18.89%	18.83%	0.3 %
Member Financed	6.63%	6.69%	(0.9) %
Employer Normal Cost	12.26%	12.14%	1.0 %
Amortization of Unfunded Actuarial Accrued Liability or (Surplus)	5.76%	3.48%	65.5 %
Employer Actuarial Contribution Rate	18.02%	15.62%	15.4 %

SECTION 2

SCOPE OF THE REPORT

This report presents the actuarial valuation of the City of Lincoln Police and Fire Pension Fund as of August 31, 2011. This valuation was prepared at the request of the City.

There was no change in the benefit structure or the actuarial assumptions and methods from the prior valuation.

Please pay particular attention to our cover letter, where the guidelines employed in the preparation of this report are outlined. We also comment on the sources and reliability of both the data and the actuarial assumptions upon which our findings are based. Those comments are the basis for our certification that this report is complete and accurate to the best of our knowledge and belief.

A summary of the findings which result from this valuation is presented in the previous section. Section 3 describes the assets and investment experience of the Plan. Sections 4 and 5 describe how the obligations of the Plan are to be met under the actuarial cost method in use. Section 6 includes the information required for the financial reporting standards established by the Governmental Accounting Standards Board (GASB).

This report includes several appendices:

- Appendix A Schedules of valuation data classified by various categories of members.
- Appendix B A summary of the current benefit structure, as determined by the provisions of governing law on August 31, 2011.
- Appendix C A summary of the actuarial methods and assumptions used to estimate liabilities and determine contribution rates.
- Appendix D A glossary of actuarial terms.

This work product was prepared solely for the City of Lincoln Police and Fire Pension Fund for the purposes described herein and may not be appropriate to use for other purposes. Milliman does not intend to benefit and assumes no duty or liability to other parties who receive this work.

SECTION 3

ASSETS

In many respects, an actuarial valuation can be thought of as an inventory process. The inventory is taken as of the actuarial valuation date, which for this valuation is August 31, 2011. On that date, the assets available for the payment of benefits are appraised. The assets are compared with the liabilities of the Plan, which are generally in excess of assets. The actuarial process then leads to a method of determining the contributions needed by members and the employer in the future to balance the Plan assets and liabilities.

Market Value of Assets

The current market value represents the "snapshot" or "cash-out" value of Plan assets as of the valuation date. In addition, the market value of assets provides a basis for measuring investment performance from time to time. Table 1 is a comparison, at market values, of Plan assets as of August 31, 2011, and August 31, 2010, in total and by investment category. Table 2 summarizes the change in the market value of assets from August 31, 2010 to August 31, 2011.

Actuarial Value of Assets

Neither the market value of assets, representing a "cash-out" value of Plan assets, nor the book values of assets, representing the cost of investments, may be the best measure of the Plan's ongoing ability to meet its obligations.

To arrive at a suitable value for the actuarial valuation, a technique for determining the actuarial value of assets is used which dampens swings in the market value while still indirectly recognizing market values. Under this methodology, the difference between the actual investment return on the market value of assets and assumed investment return on the actuarial value of assets is phased-in over a four year period. Effective with the August 31, 2009 actuarial valuation, the smoothing period was changed prospectively to five years. Table 4 shows the development of the actuarial value of assets (AVA) as of the current valuation date.

This work product was prepared solely for the City of Lincoln Police and Fire Pension Fund for the purposes described herein and may not be appropriate to use for other purposes. Milliman does not intend to benefit and assumes no duty or liability to other parties who receive this work.

c. Total	$	457,698
5. Net Change	$	1,274,613
6. Market Value of COLA Pool as of August 31, 2011	$	15,034,287

Cost-of-Living Adjustments

Effective October 1992, the Pension Fund Ordinance provides for cost-of-living (COLA) benefits to pensioners. The source of funding for the COLA benefits is not guaranteed. The City has indicated that the payment of a COLA is not guaranteed and has chosen not to pre-fund this benefit. Therefore, COLA benefits and the corresponding pool of assets were not included in this valuation of the Pension Fund or in the determination of the employer contribution. If both the benefit and the assets were included in the valuation, the resulting employer contribution would be higher than the figures reported herein. The plan's auditor should review this matter for compliance with GASB Statement No. 25.

TABLE 4

CITY OF LINCOLN POLICE AND FIRE PENSION FUND

DEVELOPMENT OF ACTUARIAL VALUE OF ASSETS

Year Ended August 31:	2009	2010	2011
Beginning of Year Values			
(1) Market Value	165,904,553	134,932,747	135,835,077
(2) Actuarial Value	179,390,472	177,526,641	172,317,463
(3) Noninvestment Net Cash Flow	(3,792,369)	(4,694,886)	(4,779,706)

Net Return - Actuarial Value	1.09%	-0.29%	-1.24%

Note: Beginning in 2009, the gain/(loss) is recognized over five years rather than four. Prior years' schedules were unchanged with respect to the amount of gain/(loss) to be recognized in future years.

This work product was prepared solely for the City of Lincoln Police and Fire Pension Fund for the purposes described herein and may not be appropriate to use for other purposes. Milliman does not intend to benefit and assumes no duty or liability to other parties who receive this work.

SECTION 4

PLAN LIABILITIES

In the previous section, an actuarial valuation was compared with an inventory process, and an analysis was given of the inventory of assets of the City as of the valuation date, August 31, 2011. In this section, the discussion will focus on the commitments (future benefit payments) of the Plan, which are referred to as its liabilities.

Table 5 contains an analysis of the actuarial present value of all future benefits (PVFB) for contributing members, inactive members, retirees and their beneficiaries. The liabilities summarized in Table 5 include the actuarial present value of all future benefits expected to be paid with respect to each member. For an active member, this value includes the measurement of both benefits already earned and future benefits to be earned. For all members, active and retired, the value extends over benefits earnable and payable for the rest of their lives and for the lives of the surviving beneficiaries.

All liabilities reflect the benefit provisions in place as of August 31, 2011. No liabilities have been included in this valuation for any future COLA payments to be made from the COLA pool.

Actuarial Accrued Liability

A fundamental principle in financing the liabilities of a retirement program is that the cost of its benefits should be related to the period in which benefits are earned, rather than to the period of benefit distribution. An actuarial cost method is a mathematical technique that allocates the present value of future benefits into annual costs. In order to do this allocation, it is necessary for the funding method to "breakdown" the present value of future benefits into two components:

(1) that which is attributable to the past, and

(2) that which is attributable to the future.

Actuarial terminology calls the part attributable to the past the "past service liability" or the "actuarial accrued liability". The portion allocated to the future is known as the present value of future normal costs, with the specific piece of it allocated to the current year being called the "normal cost". Table 7 contains the calculation of actuarial accrued liability for the Plan. The Entry Age Normal actuarial cost method is used to develop the actuarial accrued liability.

TABLE 5

TABLE 9

CITY OF LINCOLN POLICE AND FIRE PENSION FUND

PROJECTED CASH FLOWS

The chart below shows estimated benefits expected to be paid over the next twenty years, based on the assumptions used in this valuation. The "Actives" column shows benefits expected to be paid to members currently active on August 31, 2011. The "Retirees" column shows benefits expected to be paid to all other members. This includes those who, as of August 31, 2011, are receiving benefit payments or who terminated employment and are entitled to a deferred vested benefit. No future members are reflected.

Retirement and Withdrawal Benefits

Year Ending August 31	Actives	Retirees	Total
2012	$ 753,000	$ 9,832,000	$ 10,585,000
2013	1,625,000	9,713,000	11,338,000
2014	2,443,000	9,562,000	12,005,000

SECTION 5

EMPLOYER CONTRIBUTIONS

The previous two sections were devoted to a discussion of the assets and liabilities of the Plan. A comparison of Tables 4 and 5 indicates that current assets fall short of meeting the present value of future benefits (total liability). This is expected in all but a completely closed fund, where no further contributions are anticipated. In an active Plan, there will almost always be a difference between the actuarial value of assets and total liabilities. This deficiency has to be made up by future contributions and investment returns. An actuarial valuation sets out a schedule of future contributions that will deal with this deficiency in an orderly fashion.

The method used to determine the incidence of the contributions in various years is called the actuarial cost method. Under an actuarial cost method, the contributions required to meet the difference between current assets and current liabilities are allocated each year between two elements: (1) the normal cost rate and (2) the unfunded actuarial accrued liability contribution rate.

The term "fully funded" is often applied to a Plan in which contributions at the normal cost rate are sufficient to pay for the benefits of existing employees as well as for those of new employees. More often than not, Plans are not fully funded, either because of past benefit improvements that have not been completely funded or because of actuarial deficiencies that have occurred because experience has not been as favorable as anticipated. Under these circumstances, an unfunded actuarial accrued liability (UAAL) exists. Likewise, when the actuarial value of assets is greater than the actuarial accrued liability, a surplus exists.

Description of Contribution Rate Components

The Entry Age Normal (EAN) actuarial cost method is used for the valuation. Under that method, the normal cost for each year from entry age to assumed exit age is a constant percentage of the member's year by year projected compensation. The portion of the present value of future benefits not provided by the present value of future normal costs is the actuarial accrued liability. The unfunded actuarial accrued liability/(surplus) represents the difference between the actuarial accrued liability and the actuarial value of assets as of the valuation date. The unfunded actuarial accrued liability is calculated each year and reflects experience gains/losses.

In general, contributions are computed in accordance with a level percent-of-payroll funding objective. The contribution rate based on the August 31, 2011 actuarial valuation will be used to determine the actuarial required employer contribution rate to the City of Lincoln Police and Fire Pension Fund for fiscal year end 2013. In this context, the term "contribution rate" means the percentage, which is applied to a particular active member payroll to determine the actual employer contribution amount (i.e., in dollars) for the group.

As of August 31, 2011, the actuarial accrued liability was greater than the valuation assets so an unfunded actuarial accrued liability (UAAL) exists. The UAAL at August 31, 2011 is amortized, as a level percent of payroll, over a period of 30 years.

Contribution Rate Summary

In Table 10, the amortization payment related to the unfunded actuarial accrued liability, as of August 31, 2011, is developed. Table 11 develops the actuarial contribution rate for the employer.

The contribution rates shown in this report are based on the actuarial assumptions and cost methods described in Appendix C.

SECTION 6

ACCOUNTING INFORMATION

The actuarial accrued liability is a measure intended to help the reader assess (i) a retirement Plan's funded status on a going concern basis, and (ii) progress being made toward accumulating the assets needed to pay benefits as due. Allocation of the actuarial present value of projected benefits between past and future service was based on service using the Entry Age Normal actuarial cost method. Assumptions, including projected pay increases, were the same as used to determine the Plan's level percent of payroll annual required contribution between entry age and assumed exit age. Entry age was established by subtracting credited service from current age on the valuation date.

The preceding methods comply with the financial reporting standards established by the Governmental Accounting Standards Board.

The Entry Age Normal actuarial accrued liability was determined as part of an actuarial valuation of the plan as of August 31, 2011. The actuarial assumptions used in determining the actuarial accrued liability can be found in Appendix C.

This work product was prepared solely for the City of Lincoln Police and Fire Pension Fund for the purposes described herein and may not be appropriate to use for other purposes. Milliman does not intend to benefit and assumes no duty or liability to other parties who receive this work.

TABLE 13 (continued)

CITY OF LINCOLN POLICE AND FIRE PENSION FUND

Two tests of funding progress based on the relationship between valuation assets and actuarial accrued liabilities are shown above. These tests are, however, dependent upon the actuarial cost method.

The Ratio of Valuation Assets to Actuarial Accrued Liabilities is a traditional measure of a Plan's funding progress. Except in years when the benefit provisions are amended or actuarial assumptions are revised, the ratio can be expected to gradually tend toward 100%, assuming computed contribution amounts are received by the plan.

The Ratio of Unfunded Actuarial Accrued Liabilities to Valuation Payroll is another relative index of condition. In an inflationary economy, the value of dollars is decreasing. This environment results in employee pays increasing in dollar amounts, retirement benefits increasing in dollar amounts, and then, unfunded actuarial accrued liabilities increasing in dollar amounts – all at a time when the actual substance of these items may be decreasing. When looking at dollar amounts, the effects of inflation can hide the actual funding progress from year to year. Unfunded actuarial accrued liabilities dollars divided by active employee payroll dollars provides an index which attempts to eliminate the misleading effects of inflation. The smaller the ratio of unfunded liabilities to active member payroll, the stronger the Plan. Observation of this relative index over a period of years will give an indication of whether the Plan is becoming financially stronger or weaker.

Analysis of the dollar amounts of actuarial value of assets, actuarial accrued liability, or unfunded actuarial accrued liability in isolation can be misleading. Expressing the actuarial value of assets as a percentage of the actuarial accrued liability provides one indication of the Plan's funded status on a going-concern basis. Analysis of this percentage over time indicates whether the Plan is becoming financially stronger or weaker. Generally, the greater this percentage, the stronger the plan's funding. The unfunded actuarial accrued liability and annual covered payroll are both affected by inflation. Expressing the unfunded actuarial accrued liability as a percentage of covered payroll approximately adjusts for the effects of inflation and aids analysis of the progress being made in accumulating sufficient assets to pay benefits when due. Generally, the smaller this percentage, the stronger the plan's funding.

This work product was prepared solely for the City of Lincoln Police and Fire Pension Fund for the purposes described herein and may not be appropriate to use for other purposes. Milliman does not intend to benefit and assumes no duty or liability to other parties who receive this work.

Note: For valuation dates prior to 2009, information shown is from the prior actuary's report

SCHEDULE OF EMPLOYER CONTRIBUTIONS

Fiscal Year Beginning September 1	Actuarial Valuation Date	Annual Required Contribution
2003	8/31/2002	$3,297,577
2004	8/31/2003	3,684,264
2005	8/31/2004	4,077,037
2006	8/31/2005	4,056,195
2007	8/31/2006	4,076,536
2008	8/31/2007	3,316,464
2009	8/31/2008	3,752,124
2010	8/31/2009	4,651,872
2011	8/31/2010	5,574,482
2012	8/31/2011	6,718,467

* *Annual required contribution is equal to the contribution percent times the valuation payroll (item (5)) projected to the appropriate fiscal year. The employer contribution rate from 8/31/02 to 8/31/08 is based on a 10-year amortization of the UAAL/(Surplus). The UAAL is amortized over 30 years effective 8/31/09.*

** *Non-DROP payroll in 2002 and later.*

This work product was prepared solely for the City of Lincoln Police and Fire Pension Fund for the purposes described herein and may not be appropriate to use for other purposes. Milliman does not intend to benefit and assumes no duty or liability to other parties who receive this work.

GASB STATEMENTS NO. 25 AND NO. 27
DISCLOSURE INFORMATION

Notes to Financial Statement
Summary of Actuarial Methods and Assumptions

The information presented in the required supplementary schedules was determined as part of the actuarial valuation at the date indicated. Additional information as of the latest actuarial valuation follows:

Valuation date:	August 31, 2011
Actuarial cost method:	Entry Age
Amortization method:	30 years, level percent, open
Asset valuation method:	4-year smoothed market (changed prospectively to 5 years in 2009)
Actuarial assumptions:	
Investment rate of return:	7.50%
Projected salary increases*:	4.25% - 8.25%
Cost-of-living adjustments:	none

*Includes wage inflation of 4.25%

Membership data as of August 31, 2011 is provided in Appendix A of this report.

APPENDIX B

CITY OF LINCOLN POLICE AND FIRE PENSION FUND

SUMMARY OF BENEFIT PROVISIONS
(AUGUST 31, 2011)

Plan A is applicable to members who were hired on/after April 1, 1995 or who were hired prior to that date, but elected Plan A coverage.

Plan B is applicable to members who were employed on/after April 11, 1984 or who, prior to April 11, 1984, elected Plan B coverage.

Plan C is applicable to members who were employed before April 11, 1984 and did not elect to move to Plan B or A.

Regular Pay

All plans: Member's base pay and City's contributions to the Post-Employment Health Plan for the last consecutive 26 bi-weekly pay periods.

Normal Retirement Age

Plan A: Age 50
Plans B and C: Age 53

Normal Retirement

Eligibility – All Plans: Normal retirement age and 10 years of service.

Amount of Pension – Plan A: 2.56% of regular pay times years of service to a maximum of 64% of regular pay.

. ***Plan B:*** 58% of regular pay with 21 years of service plus 2% of regular pay for each year of service rendered after becoming eligible for retirement to a maximum increase of 10%. Members with less than 21 years of service receive a ratio of years of service to 21 years of 58% of regular pay.

Plan C: 54% of regular pay with 21 years of service plus 2% of regular pay for each year of service rendered after becoming eligible for retirement to a maximum increase of 10%. Members with less than 21 years of service receive a ratio of years of service to 21 years of 54% of regular pay.

This work product was prepared solely for the City of Lincoln Police and Fire Pension Fund for the purposes described herein and may not be appropriate to use for other purposes. Milliman does not intend to benefit and assumes no duty or liability to other parties who receive this work.

Early Retirement

Eligibility – All Plans: Age 50 and 21 years of service

Amount of Pension – Plan A: 2.56% of regular pay times years of service up to a maximum of 64% of regular pay.

Plan B and C:

Age/Service	Plan B	Plan C
50/21 YOS	52%	48%
51/22 YOS	54%	50%
52/23 YOS	56%	52%

Deferred Retirement (Vested Termination)

Eligibility – all plans: 10 years of service

Amount of Pension – Plan A: 2.56% of regular pay times years of service up to a maximum of 64% of regular pay.

. ***Plan B:*** 58% of regular pay with 21 years of service plus 2% of regular pay for each year of service rendered after becoming eligible for retirement to a maximum increase of 10%. Members with less than 21 years of service receive a ratio of years of service to 21 years of 58% of regular pay.

Plan C: 54% of regular pay with 21 years of service plus 2% of regular pay for each year of service rendered after becoming eligible for retirement to a maximum increase of 10%. Members with less than 21 years of service receive a ratio of years of service to 21 years of 54% of regular pay.

Duty-Related Disability

Eligibility – all plans: permanent inability to perform the duties of position from a cause occurring while in line of duty.

Amount of Pension – Plan A: 58% of regular pay.

Plan B and C: A pension equal to 58% or 54% of regular pay respectively, plus 2% of regular pay for each year of service rendered after becoming eligible for retirement, to a maximum increase of 10% of regular pay. Such pension shall continue after the member's death to the member's surviving spouse, minor children or designated Option A beneficiary (a reduced amount in this case). The above amounts are subject to deduction of the amount received from worker's compensation.

This work product was prepared solely for the City of Lincoln Police and Fire Pension Fund for the purposes described herein and may not be appropriate to use for other purposes. Milliman does not intend to benefit and assumes no duty or liability to other parties who receive this work.

Non-Duty Disability

Eligibility – all plans: permanent inability to perform duties of position from a cause not occurring in the line of duty.

Amount of Pension – A pension equal to the following percent of regular pay:

Years of Service (YOS)	Plan A	Plan B	Plan C
5 ≤ YOS < 10	23%	23%	21%
10 ≤ YOS < 15	39%	39%	36%
YOS ≥ 15	53%	53%	49%

If death results from such disability, the pension shall be paid to the member's surviving spouse until the spouse's death or remarriage, or a reduced pension will be paid to a designated beneficiary.

Duty-Related Death

Eligibility – all plans: Active member dies in the line of duty or as a result of injuries received while in the line of duty.

Amount of Pension – (a) Before Eligible for Normal Retirement: Surviving spouse receives 58% (or 54% for Plan C) of regular pay. Upon spouse's remarriage or death, the pension is payable to any dependent children under age 19.

(b) After Eligible for Normal Retirement: If a member dies after becoming eligible for a normal retirement, his designated beneficiary receives a pension equal to Option A (joint and 100% survivor actuarial equivalent benefit) which would have been payable had the deceased member retired and elected Option A.

The above amounts are subject to deduction of the amount received from worker's compensation.

Non-Duty Death

Eligibility – All Plans: 10 years of service.

Amount of Pension – All Plans: Pension which would have been payable had the member retired the day prior to his death and elected Option A (joint & 100% survivor) except any early retirement actuarial reduction shall not be applied.

Death After Retirement

Eligibility – all plans: dependent on form of payment selected.

This work product was prepared solely for the City of Lincoln Police and Fire Pension Fund for the purposes described herein and may not be appropriate to use for other purposes. Milliman does not intend to benefit and assumes no duty or liability to other parties who receive this work.

Non-Vested Termination

Eligibility – all plans: termination of employment and no pension is or will become payable.

Amount of Benefit – all plans: refund of member's contributions plus annual interest.

Employee Contributions

Plan A: 8.0% of pay.
Plan B: 7.6% of pay.
Plan C: 7.0% of pay.

Upon reaching 21 years of service, member contributions are discontinued for Plan B and Plan C members.

(DROP) Deferred Retirement Option Plan

Eligibility for the DROP:

Members of Plans B and C may join the DROP within 1 year of becoming eligible for Normal retirement benefits as described earlier in this section.

Grandfather provision allows members of Plans B and C who were eligible to retire on the date of DROP implementation, a one time opportunity to join the DROP.

Members of Plan A may join the DROP at any time after meeting the eligibility conditions for normal retirement.

DROP benefits

100% of the member's accrued benefit at the time of DROP will be contributed to the member's DROP account.

If the member elects annuity withdrawal (available to members of Plans B and C) the lump sum payment and corresponding reduced annuity will be credited to the member's DROP account.

DROP funding Period

Both the City and the employee will contribute (in accordance with the provisions of each Plan) to the Plan until the employee enters the DROP.

DROP Period

Maximum of 5 years.

This work product was prepared solely for the City of Lincoln Police and Fire Pension Fund for the purposes described herein and may not be appropriate to use for other purposes. Milliman does not intend to benefit and assumes no duty or liability to other parties who receive this work.

APPENDIX C

CITY OF LINCOLN POLICE AND FIRE PENSION FUND

Investment Return (net of investment expenses):

7.5% a year, compounded annually.

Salary Increases: These assumptions are used to project current salaries to those upon which benefits will be based. The base economic assumption was first used for the August 31, 2007 valuation.

Sample Ages	Annual Rate of Pay Increase for Sample: Base (Economic)	Merit and Longevity	Total
20	4.25%	4.00%	8.25%
25	4.25%	3.30%	7.55%
30	4.25%	2.80%	7.05%
35	4.25%	2.50%	6.75%
40	4.25%	2.20%	6.45%
45	4.25%	1.80%	6.05%
50	4.25%	1.20%	5.45%
55	4.25%	0.70%	4.95%

If the number of active members remains constant, the total active member payroll is eventually expected to increase by 4.25% annually, the base portion of the individual pay increase assumptions. This increasing payroll was recognized in amortizing the unfunded actuarial accrued liability.

Mortality Table: The 1994 Group Annuity Mortality table set forward two years for males and 1 year for females. This table was first used for the August 31, 2007 valuation. Sample values follow:

Sample Ages	Actuarial Present Value of $1 Monthly for Life		Future Life Expectancy (Years)	
	Men	Women	Men	Women
55	$128.77	$139.07	24.39	29.24
60	117.81	130.06	20.18	24.70
65	105.49	119.41	16.37	20.46
70	92.10	107.06	12.98	16.54
75	77.51	92.46	9.96	12.90
80	62.98	76.69	7.44	9.71

This assumption is used to measure the probabilities of each benefit payment being made after retirement and was first used in the August 31, 2007 valuation. Fifty percent of the mortality rates in this table were used to determine the probability of members dying before retirement. Fifty percent of the assumed deaths before retirement were assumed to be duty related and 50% were assumed to be non-duty related.

This work product was prepared solely for the City of Lincoln Police and Fire Pension Fund for the purposes described herein and may not be appropriate to use for other purposes. Milliman does not intend to benefit and assumes no duty or liability to other parties who receive this work.

Rates of separation from active membership: The rates do not apply to members eligible to retire and do not include separation on account of death or disability. This assumption measures the probabilities of members remaining in employment.

Sample Ages	Years of Service	% Separating within Next Year	
		Police	Fire
ALL	0	12.00%	8.00%
	1	8.00%	6.00%
	2	7.00%	4.50%
	3	6.00%	3.00%
	4	5.00%	2.00%
25	5 & Over	4.50%	2.00%
30		4.35%	1.40%
35		3.50%	1.00%
40		2.10%	0.80%
45		1.00%	0.60%
50		0.62%	0.10%
55		0.50%	0.10%

The rates were first used for the August 31, 2007 valuation.

Rates of Disability: These assumptions represent the probabilities of active members becoming disabled as a result of non-duty related causes or as a result of duty related causes.

Sample Ages	% Becoming Disabled Within Next Year
20	0.05%
25	0.05%
30	0.06%
35	0.09%
40	0.14%
45	0.23%
50	0.40%
55	0.60%
60	0.80%

Fifty percent of assumed liabilities were assumed to be duty related and 50% were assumed to be non-duty related.

This work product was prepared solely for the City of Lincoln Police and Fire Pension Fund for the purposes described herein and may not be appropriate to use for other purposes. Milliman does not intend to benefit and assumes no duty or liability to other parties who receive this work.

Rates of Retirement and DROP Entry: These rates are used to measure the probabilities of an eligible member retiring and/or "dropping" at the indicated age.

		Rates of Retirement and/or DROP Entry			
Old Plan		Plan A		Plans B & C	
Ages		Police	Fire	Police	Fire
50	35%	36%	18%	28%	6%
51	15	20	18	12	6
52	15	20	18	12	6
53	15	16	12	24	24
54	15	16	24	24	24
55	40	24	24	36	18
56	15	8	24	16	18
57	15	8	24	12	30
58	15	8	24	12	42
59	15	8	24	12	18
60	100	100	35	100	18
61	100	100	45	100	42
62	100	100	60	100	42
63	100	100	80	100	80
64	100	100	90	100	90
65	100	100	100	100	100

These rates were first used for the August 31, 2007 valuation.

Active Member Group Size: The number of active members was assumed to remain constant. This assumption is unchanged from previous valuations.

ACTUARIAL METHODS

Funding Method

Under the EAN cost method, the actuarial present value of each member's projected benefits allocates on a level basis over the member's compensation between the entry age of the member and the assumed exit ages. The portion of the actuarial present value allocated to the valuation year is called the normal cost. The actuarial present value of benefits allocated to prior years of service is called the actuarial accrued liability. The unfunded actuarial accrued liability represents the difference between the actuarial liability and the actuarial value of assets as of the valuation date. The unfunded actuarial accrued liability is calculated each year and reflects experience gains/losses.

The UAL is amortized as a level percentage of payroll. The payroll growth assumption is 4.25% so the annual amortization payments will increase 4.25% each year. As a result, if total payroll grows 4.25% per year, as assumed, the amortization payment will remain level as a percentage of total current payroll. The amortization period is 30 years.

Asset Valuation Method

For actuarial purposes, assets are valued using an asset smoothing method. The difference between the actual return on the market value of assets and the expected return (based on the actuarial assumed rate of return) on the actuarial value of assets is calculated each year and recognized equally over a five-year period (prior to 2009, the period was four years).

This work product was prepared solely for the City of Lincoln Police and Fire Pension Fund for the purposes described herein and may not be appropriate to use for other purposes. Milliman does not intend to benefit and assumes no duty or liability to other parties who receive this work.

APPENDIX C (continued)

MISCELLANEOUS AND TECHNICAL ASSUMPTIONS

Marriage Assumption:	100% of both males and females are assumed to be married for purposes of death-in-service benefits.
Decrement Timing:	All decrements are assumed to occur mid year.
Eligibility Testing:	Eligibility for benefits is determined based upon the age nearest birthday and years of service on the date the decrement is assumed to occur.
Benefit Service:	Exact fractional service on the decrement date is used to determine the amount of benefit payable.
Decrement Operation:	Disability decrements do not operate during the first five years of service. They also do not operate during retirement eligibility.
Normal Form of Benefit:	The assumed normal form of benefit is the straight life form.
Incidence of Contributions:	Contributions are assumed to be received continuously throughout the applicable fiscal year based upon the contribution rate shown in this report, and the actual payroll at the time contributions are made. New entrant normal cost contributions are applied to the funding of new entrant benefits.
Funding Period:	Both the City and employee contribute (in accordance with the provisions of each plan) to the Plan until the employee enters the DROP or otherwise exits the Plan.

This work product was prepared solely for the City of Lincoln Police and Fire Pension Fund for the purposes described herein and may not be appropriate to use for other purposes. Milliman does not intend to benefit and assumes no duty or liability to other parties who receive this work.

APPENDIX D

GLOSSARY OF TERMS

Actuarial Accrued Liability	The difference between the actuarial present value of Plan benefits and the actuarial value of future normal costs. Also referred to as "accrued liability" or "actuarial liability."
Actuarial Assumptions	Estimates of future experience with respect to rates of mortality, disability, turnover, retirement, rate or rates of investment income and salary increases. Decrement assumptions (rates of mortality, disability, turnover and retirement) are generally based on past experience, often modified for projected changes in conditions. Economic assumptions (salary increases and investment income) consist of an underlying rate in an inflation-free environment plus a provision for a long-term average rate of inflation.
Accrued Service	Service credited under the Plan which was rendered before the date of the actuarial valuation.
Actuarial Equivalent	A single amount or series of amounts of equal actuarial value to another single amount or series of amounts, computed on the basis of appropriate assumptions.
Actuarial Cost Method	A mathematical budgeting procedure for allocating the dollar amount of the actuarial present value of retirement Plan benefit between future normal cost and actuarial accrued liability. Sometimes referred to as the "actuarial funding method."
Experience Gain (Loss)	The difference between actual experience and actuarial assumptions anticipated experience during the period between two actuarial valuation dates.
Actuarial Present Value	The amount of funds currently required to provide a payment or series of payments in the future. It is determined by discounting future payments at predetermined rates of interest and by probabilities of payment.
Amortization	Paying off an interest-discounted amount with periodic payments of interest and principal, as opposed to paying off with lump sum payment.
Normal Cost	The actuarial present value of retirement Plan benefits allocated to the current year by the actuarial cost method.

This work product was prepared solely for the City of Lincoln Police and Fire Pension Fund for the purposes described herein and may not be appropriate to use for other purposes. Milliman does not intend to benefit and assumes no duty or liability to other parties who receive this work.

Unfunded Actuarial Accrued Liability

The difference between actuarial accrued liability and the valuation assets.

Most retirement Plans have an unfunded actuarial accrued liability. They arise each time new benefits are added and each time an actuarial loss is realized.

The existence of unfunded actuarial accrued liability is not in itself bad, any more than a mortgage on a house is bad. Unfunded actuarial accrued liability does not represent a debt that is payable today. What is important is the ability to amortize the unfunded actuarial accrued liability and the trend in its amount.

This work product was prepared solely for the City of Lincoln Police and Fire Pension Fund for the purposes described herein and may not be appropriate to use for other purposes. Milliman does not intend to benefit and assumes no duty or liability to other parties who receive this work.
