36027	M5		EVERYTHING CHECKED OUT OKAY	

Done Internet

This screen lists each unit that has completed a checklist for the Inspection Date specified, and the Inspection Type specified. Each row lists the Fire Shop Unit ID along with the Alternate Unit ID (which is the common name used by Fire Dept personnel for a unit). It also lists the number of problem items from the checklist of that unit, and the comments from that checklist.

Units that have a problem of any sort are displayed above the units where everything is okay. Also, units with a problem use a textarea box to display the comments instead of just displaying the comments in a normal fashion. This makes those rows easier to distinguish visually.

Occasionally numbered buttons will appear in the rightmost column of the screen. These buttons are for Fire Shop purposes only. Any non Fire Shop user who clicks one of those buttons will get a screen that says that the user is not authorized to use that screen.
