Good Afternoon Steve,

Property rights start and stop at your property lines. All setbacks must be measured from ALL participating property lines.

Wind Turbines should not dictate what we can and cannot do on our own property. Period.
That's fair.

The setback that you are proposing is unacceptable. In recent years United States has adopted larger setbacks. It needs to be 5 if not 10 times the hub height.

If wind companies say they can't operate turbines at these safe noise levels, then they are UNSAFE and don't belong near homes.

Please respect our human rights..

Thank you
JoJen Allder
