the article in the news June 14th regarding wind farm rules did not address bird populations as a concern -

please put into place a method to determine and protect the flyway patterns of the bird populations that live in and pass through Nebraska – articles regarding other wind and solar farms list the hundreds or thousands of birds that die as result of bad planning -

as this was the email address listed on the page when I searched the lincoln.ne.gov site I am sending my comments to you -

thank you – Judy Schmidt
