

## What is a Water Service Line?

Your water service line is the pipe that connects your home to the City of Lincoln water system. The property owner owns the service line. Homes built before 1950 may have water service lines made of lead or lead-contaminated galvanized pipe. Lincoln Water System is offering to replace these old service lines at no cost to property owners.

## Do I Have a Lead Service Line?

Go to [lincoln.ne.gov/LeadSafe](http://lincoln.ne.gov/LeadSafe) to see if your property has a lead or lead-contaminated galvanized service line.

Let's work together  
to build a healthier  
community.

Your Home  
Your Neighborhood  
Your Future

Lincoln Water System will contact property owners who may have lead or lead-contaminated galvanized service lines in Lincoln.

The Lead Safe Lincoln Lead Service Line Replacement Program will only pay for service line replacements that are a part of the program.

# LEAD SAFE LINCOLN

## Lead Service Line Replacement Program

### A New Water Service Line for Your Home

Lincoln Water System is offering an opportunity to upgrade your lead or lead-contaminated galvanized service line. The cost of replacing a lead line will be fully paid for by the City. This initiative is part of our commitment to ensure the reliability and safety of the water for all Lincoln residents.

### Why Sign Up?

#### A Healthier Home

Old lead and lead-contaminated service lines can lead to water contamination. A new service line means cleaner water for you and your family.

#### A Reliable Service Line

Replacing galvanized service lines with copper is a significant improvement to a home's plumbing system. Galvanized service lines corrode over time which can lead to leaks, rusty water, and restricted water flow to the home.

#### Save up to \$10,000!

Your home's new copper service line will be installed and comes with a two-year warranty. The cost of replacing a lead line will be paid for by the City. By participating in Lead Safe Lincoln's Lead Service Line Replacement Program, you can save \$5,000 to \$10,000 by allowing the City to replace the line for you.

### How It Works

- ▶ **Free assessment and free replacement when the Lead Service Line Replacement Program is in your neighborhood** - We'll inspect your current service line to determine if it is eligible for replacement.
- ▶ **Work directly with the plumber** - Discuss the unique needs of your home and schedule your replacement with the plumber.
- ▶ **Professional installation** - Our licensed plumbers replace service lines with efficiency and care. Most replacements are completed in less than a day.
- ▶ **Ongoing support** - Lincoln Water System and its partners can help provide information and support throughout the replacement process.
