or contact your local garbage hauler
Thank you for your cooperation

Using 55-gallon plastic or fiberboard containers. The size and weight of these containers might cause injury to the garbage haulers.

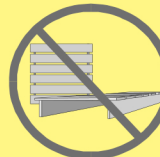

Using plastic bags, paper bags (except for grass clippings) or boxes of garbage NOT placed in a proper container. Plastic bags and open containers encourage animals to feed on the contents and scatter litter.

Disposing of household hazardous wastes including liquid paint, button batteries, chemical cleaners, pesticides, etc. Contact the Lincoln Lancaster County Health Department for information about proper disposal methods.

Filling garbage containers to overflowing so that lids do not fit correctly. Open containers have the potential to cause litter and attract flies and other animals.

Placing containers on wooden pallets. Spilled trash can become trapped in the slats of the pallets and attract rats and other pests.

Disposing of hazardous automotive waste including used oil, antifreeze, and batteries. Contact the Lincoln Lancaster County Health Department for information about proper disposal methods.
